Marl, Germany – August 12, 2025

CFH GmbH strengthens international focus through strategic partnership with Yancoal International

CFH GmbH, based in Marl, Germany, announces the successful completion of two significant strategic transactions.

First, Yancoal International Holding Co., Ltd., a company of the Chinese Yankuang Energy Group and Shandong Energy Group, has acquired 51 % of the shares in CFH GmbH. Second, CFH GmbH has acquired a 51 % stake in the Turkish fan manufacturer AIRONN.

Yancoal International's investment represents an important milestone in CFH GmbH's international growth strategy. The partnership opens up new opportunities for technological innovation, global market presence, and sustainable development.

“We are delighted to have gained a partner in Yancoal International that shares our technological ambitions and our vision of a sustainable future,” said the management of CFH GmbH. “This collaboration strengthens our international position and enables us to deploy our solutions even more effectively worldwide.”

Yancoal International brings extensive experience in global resource allocation and industrial cooperation to the table. Together with CFH, the aim is to set new standards in the development of intelligent ventilation and environmental technologies – especially for applications in mining, tunnel construction and industry.

As part of its international expansion, CFH GmbH has also acquired a 51% stake in AIRONN, a leading manufacturer of ventilation systems based in Turkey.

AIRONN ideally complements CFH GmbH's product portfolio and expands its market presence, particularly in the field of jet fans. The use of AIRONN's established sales networks opens cross-selling potential for both sides and accelerates order intake in several regions.

With these strategic partnerships, CFH GmbH is sending a strong signal for international cooperation, technological excellence, and sustainable growth – with the aim of strengthening the successful development of the company in Germany and CFH's international subsidiaries in the long term. The targeted expansion of the network and the pooling of expertise create a strong basis for future developments – for the benefit of customers, partners, and markets worldwide.
